

## Color recognition

### 1. Learning target

In this course, we will learn how to use Micro:bit and color recognition module to achieve color recognition function.

### 2. Preparation

Connect the module to Micro:bit board by expansion board, as shown below.

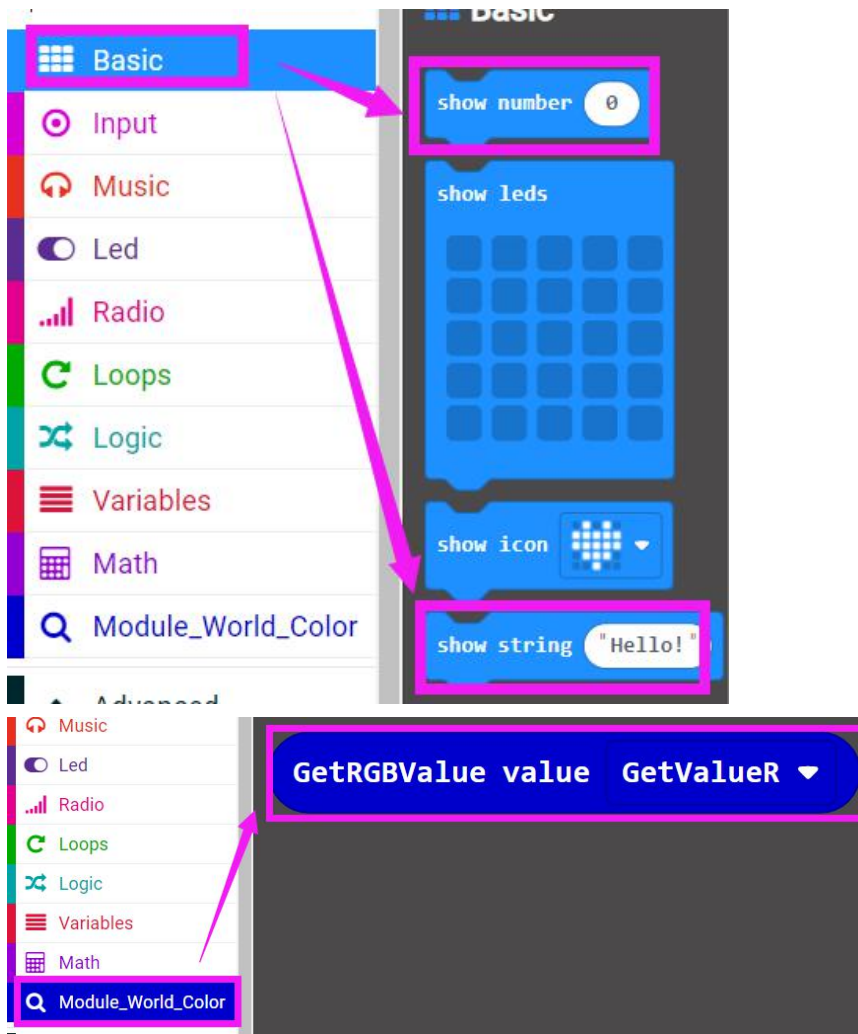

### 3. Programming method

**Mode 1 online programming:** First, we need to connect the micro:bit to the computer by USB cable. The computer will pop up a USB flash drive and click on the URL in the USB flash drive: <http://microbit.org/> to enter the programming interface. Add the Yahboom package [https://github.com/YahboomTechnology/module\\_world\\_color](https://github.com/YahboomTechnology/module_world_color) and to program.

**Mode 2 offline programming:** We need to open the offline programming software. After the installation is complete, enter the programming interface, click **【New Project】**, add Yahboom package: [https://github.com/YahboomTechnology/module\\_world\\_color](https://github.com/YahboomTechnology/module_world_color), you can start programming.

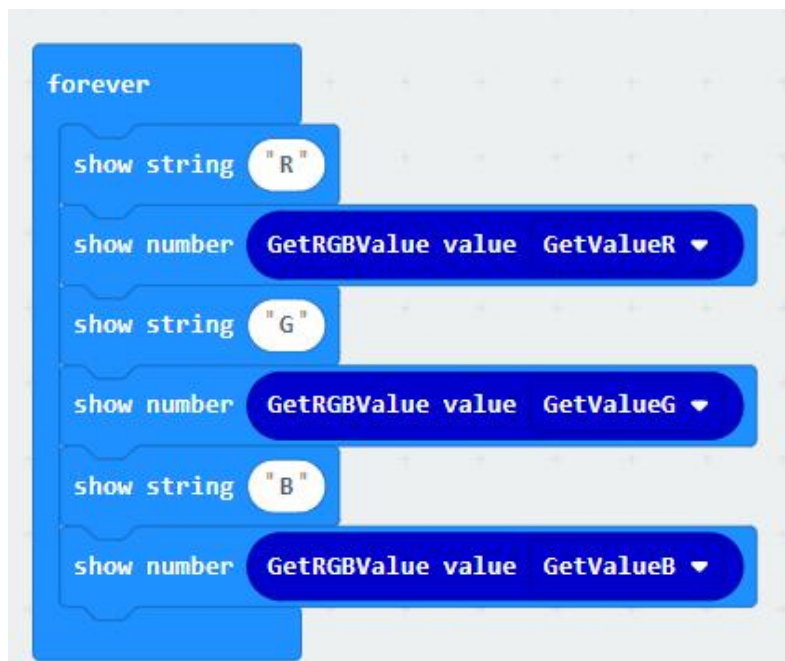

### 4. Looking for blocks

The following is the location of the building blocks required for this programming.

### 5.Combine block

The summary program is shown below.

## 5. Phenomenon

After the program is downloaded successfully. The Micro:bit dot matrix will display "R" and red value, Micro:bit dot matrix will display "G" and green value, Micro:bit dot matrix will display "B" and blue value.
