

### **Emergency light**

## 1. Learning target

In this course, we will earn how to use Micro:bit, super:bit expansion board, RGB light and photosensitive sensor module to make a emergency light function.

## 2. Preparation

Connect the module to Micro:bit board by expansion board, as shown below.

## 3. Programming method

**Mode 1 online programming:** First, we need to connect the micro:bit to the computer by USB cable. The computer will pop up a USB flash drive and click on the URL in the USB flash drive: <a href="http://microbit.org/">http://microbit.org/</a> to enter the programming interface. Add the Yahboom package <a href="https://github.com/YahboomTechnology/SuperBitLibV2">https://github.com/YahboomTechnology/SuperBitLibV2</a> to program.

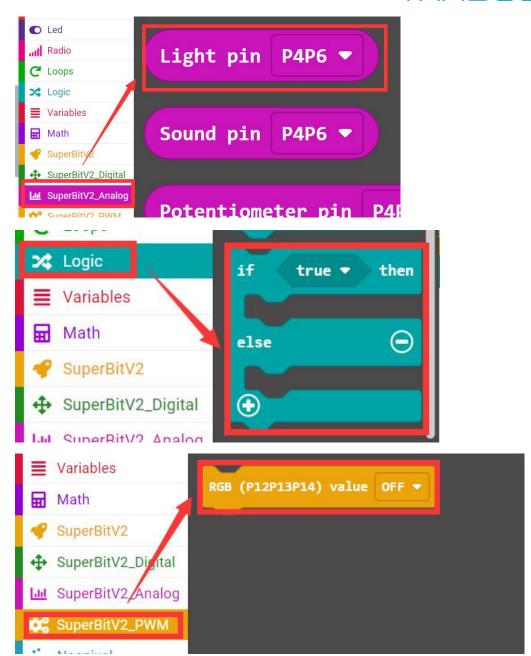

**Mode 2 offline programming:** We need to open the offline programming software. After the installation is complete, enter the programming interface, click 【New Project】, add Yahboom package:

 $\frac{https://github.com/YahboomTechnology/SuperBitLibV2}{programming.} \ , \ you \ can \ start$ 

#### 4.Looking for blocks

The following is the location of the building blocks required for this programming.

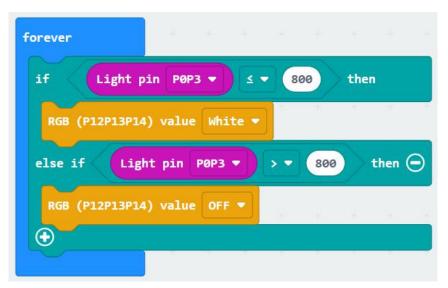

## 5.Combine block

The summary program is shown below.

# 5. Phenomenon

After the program is downloaded successfully. When we block the photosensitive module with our hands, the RGB light is on, otherwise the RGB light is off.
