Temperature and humidity broadcaster
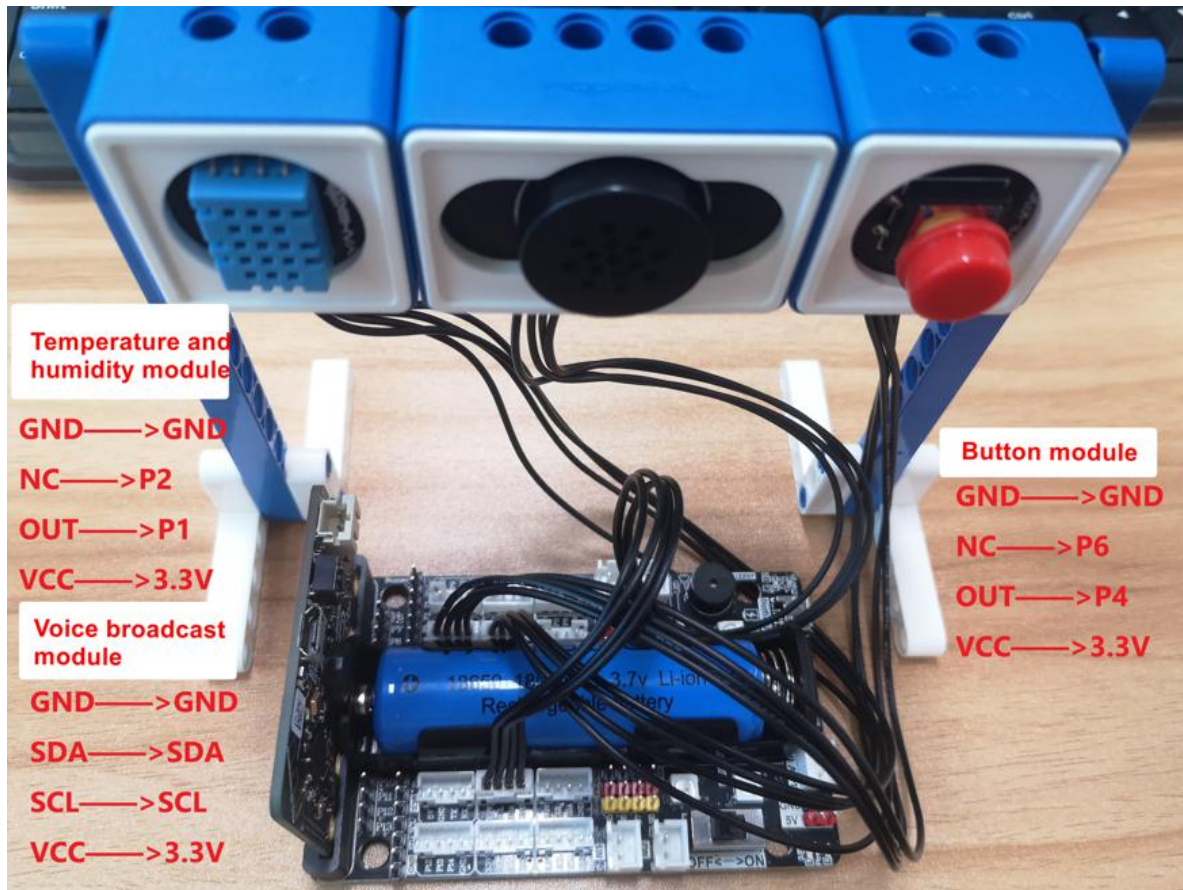

1. Learning target

In this course, we will learn how to use Micro:bit, voice broadcast module, temperature and humidity sensor and key module realize voice broadcast temperature and humidity.

2. Preparation

Connect the module to Micro:bit board by expansion board, as shown below.

Note: The voice broadcast module used in this course needs to be purchased additionally. Link:https://category.yahboom.net/products/world-of-module

3.Programming method

Mode 1 online programming: First, we need to connect the micro:bit to the computer by USB cable. The computer will pop up a USB flash drive and click on the URL in the USB flash drive: http://microbit.org/ to enter the programming interface. Add the Yahboom package https://github.com/YahboomTechnology/SuperBitLibV2 and https://github.com/YahboomTechnology/Speech to program.
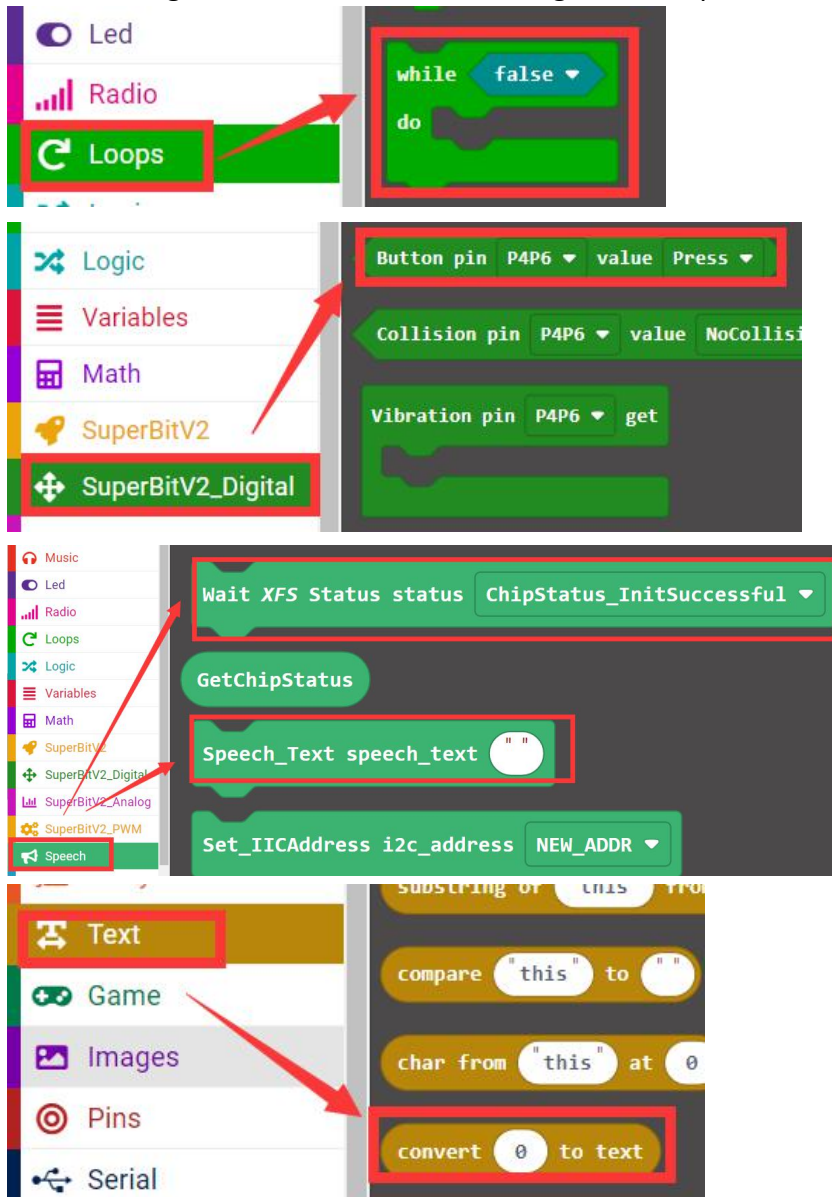

Mode 2 offline programming: We need to open the offline programming software. After the installation is complete, enter the programming interface, click 【New Project】, add Yahboom package: https://github.com/YahboomTechnology/SuperBitLibV2 and https://github.com/YahboomTechnology/Speech, you can start programming.
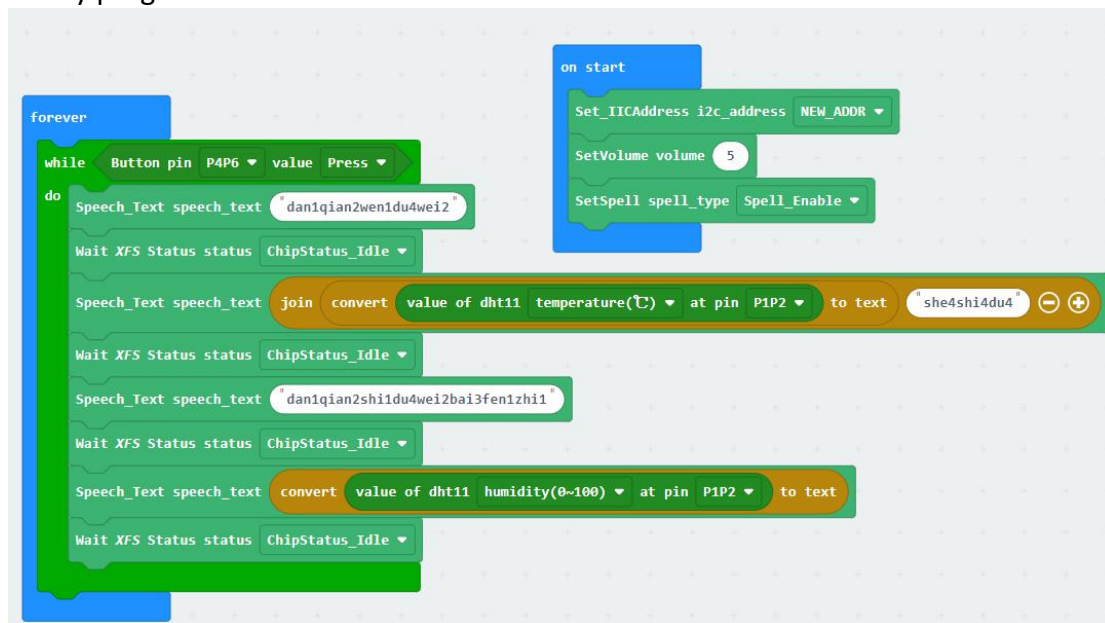

4.Looking for blocks

The following is the location of the building blocks required for this programming.

5.Combine block

The summary program is shown below.

5. Phenomenon

After the program is downloaded successfully. When we press the key module, the voice broadcast module will broadcast the current detected temperature and air humidity percentage.
